Frontal Area is the total area in square feet that a moving vehicle and trailer exposes to air resistance. The chart below shows the maximum trailer frontal area that must be considered for a vehicle/trailer combination. Exceeding these limitations may significantly reduce the performance of your towing vehicle.

**FRONTAL AREA CONSIDERATIONS**

<table>
<thead>
<tr>
<th>FRONTAL AREA LIMITATIONS/CONSIDERATIONS</th>
<th>WITH 55 sq. ft.</th>
<th>With or Without Class IV Trailer Tow Package</th>
</tr>
</thead>
</table>

**FRONTAL AREA LIMITATIONS/CONSIDERATIONS**

**REQUIRED EQUIPMENT**

Includes items that must be installed.* Your New Vehicle Limited Warranty (see your dealer for a copy) may be voided if you tow without them.

For towing capacity over 5,000 pounds – Class IV Trailer Tow Package (52Q)

*Check with your dealer for additional requirements, restrictions and limited warranty details.

**AVAILABLE TRAILER TOWING PACKAGE**

<tbody>
<tr>
<td>7-Wire Harness &amp; 4-/7-Pin Connector</td>
<td>X</td>
</tr>
<tr>
<td>250-Amp Alternator (Gas engine only)</td>
<td>X</td>
</tr>
<tr>
<td>Hitch Receiver</td>
<td>X</td>
</tr>
<tr>
<td>Blind Spot Detection with Cross-Traffic Alert and Trailer Coverage</td>
<td>X</td>
</tr>
<tr>
<td>Smart Trailer Tow</td>
<td>X</td>
</tr>
<tr>
<td>Trailer Sway Control</td>
<td>X</td>
</tr>
</tbody>
</table>

*Note: Trailer Towing Package recommended for all vehicles that will be used for towing to help ensure easy, proper connection of trailer lights.

**FACTORY-INSTALLED TRAILER HITCH RECEIVER OPTION**

Included with Class IV Trailer Tow Package – Option Code 52Q

The chart below shows the weight-carrying capacity of this hitch receiver. (This capacity also is shown on a label affixed to each receiver.)

<table>
<thead>
<tr>
<th>Weight-Carrying Max. Trailer Capacity (lbs.)</th>
<th>Max. Tongue Load (lbs.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>6,700</td>
<td>670</td>
</tr>
</tbody>
</table>

*Hitch receivers do not include a hitch ball or ball mounting. You are responsible for obtaining the proper hitch ball, ball mounting, and other appropriate equipment to tow both the trailer and its cargo load.

Maximum payload and towing capabilities are for properly equipped base vehicles with required equipment and a 150-lb. driver and vary based on cargo, vehicle configuration, accessories and number of passengers. See label on door jamb for carrying capacity of a specific vehicle. Horsepower, torque, payload and towing are independent attributes and may not be achieved simultaneously. For additional information, see your Lincoln Dealer.

Preliminary 2021 Lincoln Towing information. Final version will be published September 2020.
TOGWNG BASICS

Towing a trailer is demanding on your vehicle, your trailer and your personal driving skills.
Follow some basic rules that will help you tow safely and have a lot more fun.

CARGO AND WEIGHT DISTRIBUTION

For optimum handling and braking, the load must be properly distributed

- Keep center of gravity low for best handling
- Approximately 60% of the allowable cargo weight should be in the front half of the trailer and 40% in the rear (within limits of tongue load weight)
- Load should be balanced from side-to-side to optimize handling and tire wear
- Load must be firmly secured to prevent shifting during cornering or braking, which could result in a sudden loss of control

BEFORE STARTING

Before setting out on a trip, practice turning, stopping and backing up your trailer in an area away from heavy traffic

- Know clearance required for trailer roof
- Check equipment (make a checklist)

BACKING UP

Back up slowly, with someone spotting near the rear of the trailer to guide you

- Place one hand at bottom of steering wheel and move it in the direction you want the trailer to go
- Make small steering inputs—slight movement of steering wheel results in much greater movement in rear of trailer

TURNING

When turning, be sure to swing wide enough to allow trailer to avoid curbs and other obstructions.

- Allow considerably more distance for stopping with trailer attached
- Remember, the braking system of the tow vehicle is rated for operation at the GVWR, not GCWR
- If your tow vehicle is a Navigator and your trailer has electric brakes, the optional Integrated Trailer Brake Controller (TBC) assists in smooth and effective trailer braking by powering the trailer’s electric or electric-over-hydraulic brakes with proportional output based on the towing vehicle’s brake pressure
- If you are experiencing trailer sway and your vehicle is equipped with electric brakes and a brake controller, activate the trailer brakes with the brake controller by hand. Do not apply the tow vehicle brakes as this can result in increased sway

TOWING ON HILLS

Downshift the transmission to assist braking on steep downgrades and to increase power (reduce lugging) when climbing hills.

PARKING WITH A TRAILER

Whenever possible, vehicles with trailers should not be parked on a grade. However, if it is necessary, place wheel chocks under the trailer’s wheels, following the instructions below:

- Apply the foot service brakes and hold
- Have another person place the wheel chocks under the trailer’s wheels on the downgrade side
- Once the chocks are in place, release brake pedal, making sure the chocks will hold the vehicle and trailer
- Apply the parking brake
- Shift automatic transmission into park
- With 4-wheel drive, make sure the transfer case is not in neutral (if applicable)

STARTING OUT PARKED ON A GRADE

- Apply the foot service brake and hold
- Start the engine with transmission in park
- Shift the transmission into gear and release the parking brake
- Release the brake pedal and move the vehicle uphill to free the chocks
- Apply the brake pedal while another person retrieves the chocks

ACCELERATION AND PASSING

- The added weight of the trailer can dramatically decrease the acceleration of the towing vehicle—exercise caution
- When passing a slower vehicle, be sure to allow extra distance. Remember, the added length of the trailer must clear the other vehicle before you can pull back in
- Signal and make your pass on level terrain with plenty of clearance
- If necessary, downshift for improved acceleration

DRIVING WITH AN AUTOMATIC OVERDRIVE TRANSMISSION

With certain automatic overdrive transmissions, towing—especially in hilly areas—may cause excessive shifting between overdrive and the next lower gear

- To eliminate this condition and achieve steadier performance, override can be locked out (refer to the owner’s manual)
- If excessive shifting does not occur, use override to enhance performance
- Override may also be locked out to obtain engine braking on downgrades
- When available, select tow/haul mode to automatically eliminate unwanted gear search and help control vehicle speed when going downhill

DRIVING WITH CRUISE CONTROL

- Turn off the cruise control with heavy loads or in hilly terrain. The cruise control may turn off automatically when you are towing on long, steep grades. Use caution while driving on wet roads and avoid using cruise control in rainy or winter weather conditions

TIRE PRESSURE

- Underinflated tires get hot and may fail, leading to possible loss of vehicle control
- Overinflated tires may wear unevenly and compromise traction and stopping capability
- Tires should be checked often for conformance to recommended cold inflation pressures

SPARE TIRE USE

- A conventional, identical full-size spare tire is required for trailer towing (mini, compact and dissimilar full-size spare tires should not be used; always replace the spare tire with a new road tire as soon as possible)

ON THE ROAD

After about 50 miles, stop in a protected location and double-check:
- Trailer hitch attachment
- Lights and electrical connections
- Trailer wheel lug nuts for tightness
- Engine oil—check regularly throughout trip

HIGH ALTITUDE OPERATION

- Your vehicle may have reduced performance when operating at high altitudes and when heavily loaded or towing a trailer. While driving at elevation, in order to match driving performance as perceived at sea level, reduce GVs and GCWs by 2% per 1,000 ft. elevation.

POWERTRAIN/FRONTAL AREA CONSIDERATIONS

The charts in this Guide show the minimum powertrain needed to achieve an acceptable towing performance for the listed GCW of tow vehicle and trailer

- Under certain conditions, however, (e.g., when the trailer has a large frontal area that adds substantial air drag or when trailering in hilly or mountainous terrain) it is wise to choose a vehicle with a higher GCW rating

Towing performance is maximized with a low-drag, rounded front design trailer

SELECTING A TRIM SERIES

For your specific vehicle’s tow capability could be reduced based on weight of selected trim series and option content.

Note: For additional trailering information pertaining to your vehicle, refer to the vehicle owner’s manual
